

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1 1. (Currently amended) A method for messaging with devices in order to
2 determine one or more actions to perform, the method comprising:
3 storing information [[for]] associated with a message, the stored information
4 comprising action information corresponding to the one or more actions that enables applications
5 to perform the one or more actions;
6 sending a message to a device, the message including a message identifier
7 generated to uniquely identify the message and one or more action identifiers corresponding to
8 the one or more actions;
9 receiving a response message from the device~~[[.]]the response message including~~
10 ~~an action identifier in the one or more action identifiers and the message identifier;~~
11 determining the message identifier from the received message;
12 determining an action identifier in the one or more action identifiers from the
13 received message;
14 determining the retrieving stored information associated the message using the
15 message identifier received in the response message from the device;
16 determining action information in the stored information corresponding to an
17 action in the one or more actions using the action identifier; and
18 performing the action using the action information.

1 2. (Original) The method of claim 1, wherein the action information
2 comprises information compatible with a web-based application, wherein the web-based
3 application is used to perform the action.

3. (Original) The method of claim 1, wherein the sent message comprises a text-based message and the response message comprises a text-based message.

4. (Original) The method of claim 1, further comprising sending a result of the performed action to the device.

5. (Currently amended) The method of claim 1, further comprising:
determining ~~device~~ information ~~associated with~~ indicative of the device based on
the response message[[.]]; and
wherein retrieving the stored information associated the message comprises
determining the stored information in response to the message identifier and the ~~device~~
information indicative of the device ~~are used to determine the stored information.~~

6. (Currently amended) The method of claim 5, wherein the device information comprises at least ~~one of~~ information specific to [[a]] the device and information specific to a user associated with the device.

7. (Original) The method of claim 1, wherein the device comprises a mobile device.

8. (Currently amended) A method for messaging with devices in order to determine one or more actions to perform, the method comprising:
generating information identifying one or more actions performed by applications;
storing information ~~on how to perform~~ that enables the one or more actions to be performed by the applications;
generating a message identifier that uniquely identifies a message to be send to a device;
generating a mapping between message identifier and the information that enables performance of the one or more actions by the applications;

11 sending ~~[[a]] the message to [[a]] the device, the message~~ including the message
12 identifier generated to uniquely identify the message and the information identifying the one or
13 more actions;
14 receiving a text message from the device, ~~the text message~~ including the message
15 identifier and information identifying a desired action in the one or more actions;
16 ~~determining~~ retrieving, in response to the mapping between the message
17 identifier, stored information on how to perform that enables the desired action to be performed
18 using the information specifying the desired action received in the text message; and
19 causing the determined action to be performed using the stored information ~~on~~
20 ~~how to perform that enables~~ the desired action to be performed.

1 9. (Currently amended) The method of claim 8, wherein the information ~~on~~
2 ~~how to perform that enables~~ the one or more actions to be performed comprises web-based
3 information.

1 10. (Original) The method of claim 9, wherein the web-based information
2 comprises a URL.

1 11. (Original) The method of claim 8, wherein the sent message comprises a
2 plain-text message.

1 12. (Original) The method of claim 8, wherein the text message comprises a
2 plain-text message.

1 13. (Currently amended) The method of claim 8, further comprising:
2 determining information indicative of the device and a user associated with the
3 device; and
4 wherein determining the stored information comprises determining the stored
5 information in response to the information indicative of the device and the user associated the
6 device.

7 ~~wherein determining the stored information comprises using a message identifier~~
8 ~~for the received message to determine the stored information.~~

1 14. (Original) The method of claim 8, further comprising sending a result of
2 the performed action to the device.

1 15. (Currently amended) A device for generating and processing messages to
2 determine actions to perform, the device comprising:

3 a message generator configured to generate a message identifying one or more
4 actions and to send the generated message to a device, the message including a message
5 identifier generated to uniquely identify the message;

6 an information storer configured to store information associated with the
7 identified one or more actions performed by applications;

8 a receiver configured to receive a response message from the device, wherein the
9 response message is indicative of the message identifier and identifies an action in the one or
10 more actions identified in the message sent to the device;

11 an action determiner configured to ~~determine~~ retrieve at least a portion of stored
12 information for the identified action in response to the message identifier received in the
13 response message; and

14 an action performer configured to cause the action to be performed using the
15 determined stored information.

1 16. (Original) The device of claim 15, wherein the generated message
2 comprises a text message.

1 17. (Original) The device of claim 15, wherein the response message
2 comprises a text message.

1 18. (Original) The device of claim 15, wherein the one or more actions
2 comprise web-based actions.

1 19. (Currently amended) The device of claim 15, wherein the action
2 determiner determines the stored information using at least ~~one of a~~ the message identifier for the
3 response message to and information specific to the response message.

1 20. (Original) The device of claim 15, wherein the information specific to the
2 response message comprises information specific to a user.

1 21. (Currently amended) A system configured to perform actionable
2 messaging, the system comprising:
3 one or more devices;
4 an application configured to perform actions; and
5 an actionable message device configured to communication with the one or more
6 devices and the application, the device comprising:
7 a message generator configured to generate a message identifying one or
8 more actions and to send the generated message to a device, the message including a message
9 identifier generated to uniquely identify the message;
10 an information storer configured to store information associated with the
11 identified one or more actions that enables the application to perform the one or more actions;
12 a receiver configured to receive a response message from the device,
13 wherein the response message is indicative of the message identifier and identifies an action in
14 the one or more actions identified in the message sent to the device;
15 an action determiner configured to determine retrieve stored information
16 for the identified action in response to the message identifier received in the response message;
17 and
18 an action performer configured to cause the application to perform the
19 identified action to be performed using the determined stored information for the identified
20 action.

1 22. (Original) The system of claim 21, wherein the one or more devices
2 comprise mobile devices.

1 23. (Original) The system of claim 22, wherein the mobile devices are
2 configured to receive messages exclusive of web-based messages.

1 24. (Original) The system of claim 22, wherein the mobile devices are
2 configured to send messages exclusive of web-based messages.

1 25. (Original) The system of claim 21, wherein the application comprises a
2 web-based application.
